

BEST SOLUTION FOR DETECTING FAKE CRYPTO INVESTMENT WEBSITES

Fake crypto investment websites can be exposed using a layered approach—WHOIS, hosting analysis, SSL inspection, blockchain wallet tracking, and reputation intelligence. Combining these techniques provides strong evidence to confirm scams and map scam networks instead of relying on guesswork.

1. WHOIS Lookup → domain age & contacts
2. SSL Review → encryption vs validation
3. Hosting/IP analysis → server reputation
4. Content & claims evaluation
5. Reputation scoring (ScamAdviser/VT)
6. Business presence verification

For Example:

abc.com

WHOIS Information :

<https://who.is>

IP Address: XX.XX.XX.XX

Registrar Information

HOSTINGER operations, UAB

WHOIS Server

whois.verisign-grs.com

Referral URL

<http://www.hostinger.com>

Important Dates

Created : XX/XX/XXXX

Updated : XX/XX/XXXX

Expires : XX/XX/XXXX

Similar Domains

abcdf073.com

abcrz.de

abcd0to1.com etc...

2 SSL Review → Encryption vs Validation

 <https://www.ssllabs.com/ssltest/>

 <https://crt.sh>

 <https://www.sslchecker.com/>

What to check manually:

- SSL issuer (Let's Encrypt / DigiCert / GlobalSign)
- Certificate type:
 - DV (Domain Validation)
 - OV (Organization Validation)
 - EV (Extended Validation)
- Validity period (90 days = common in scams)

 **Important:**

SSL ≠ Trust (it only encrypts traffic)

3 Hosting & IP Analysis → Server Reputation

<https://securitytrails.com>

<https://viewdns.info>

<https://www.shodan.io>

<https://abuseipdb.com>

What to check manually:

- IP address
- Hosting provider
- Country
- Other domains on same IP
- Abuse reports

 **Red flag:**

Many suspicious domains on same IP = scam infrastructure

Ex:

The screenshot shows the ViewDNS.info website interface. The browser address bar displays 'viewdns.info'. The website has a navigation bar with links for 'Tools', 'API', 'Research', and 'Data'. There are also 'Login' and 'Sign Up' buttons. The main content area features several tool cards:

- Reverse IP Lookup**: Find all sites hosted on a given server. Input: 'Enter domain or IP'. Button: 'Lookup'.
- Reverse Whois Lookup**: Find domains owned by an individual or company. Input: 'Enter registrant name or email address'. Button: 'Lookup'.
- IP History**: Show historical IP addresses for a domain. Input: 'Enter domain'. Button: 'Lookup'.
- DNS Report**: Provides a complete report on your DNS settings. Input: 'Enter domain'. Button: 'Generate Report'.
- Subdomain Discovery** (New): Find all known subdomains for a domain. Input: 'Enter domain'. Button: 'Discover Subdomains'.
- Reverse NS Lookup**: Find all sites that use a given nameserver. Input: 'Enter name server (e.g. ns1.google.com)'. Button: 'Lookup'.
- IP Location Finder**: Find the geographic location of an IP Address.
- Chinese Firewall Test**: Checks whether a site is accessible from China.
- DNS Propagation Checker**: Check whether recent DNS changes have propagated.

4 Content & Claims Evaluation (Manual)

 <https://web.archive.org> (Wayback Machine)

 <https://copyscape.com>

What to check manually:

- “Guaranteed returns” language
- Fake testimonials
- Copied content from other sites
- Sudden content changes over time

Rule:

If returns are guaranteed → it's almost always fraud

5 Reputation Scoring → ScamAdviser / VirusTotal

<https://www.scamadviser.com>

<https://www.virustotal.com>

<https://transparencyreport.google.com/safe-browsing/search>

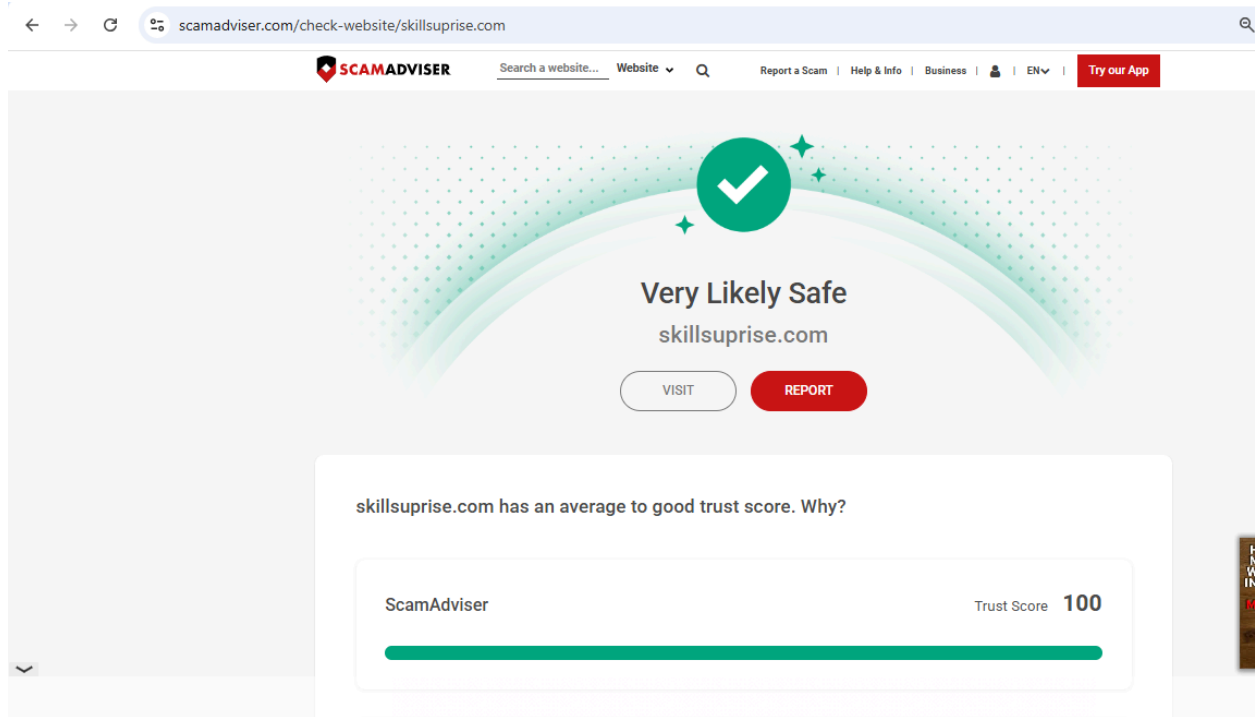

What to check manually:

- Trust score
- User complaints
- Malware/phishing flags
- Blacklist detection

Note:

Low score ≠ final proof

Multiple red flags = confirmation

<https://www.virustotal.com> it Gives better result

6 Business Presence Verification

- <https://www.google.com/maps>
- <https://www.linkedin.com/company>
- <https://www.signalhire.com>
- <https://www.crunchbase.com>
- <https://www.indiamart.com> (India businesses)

What to check manually:

- Physical address
- Employee profiles
- Company age
- Business registration consistency

 Red flag:

No employees + fake address + copied logos
